

Motor Shell, Motor Parts

[Motor Shell, Motor Parts](#)

1. Motor Shell, Motor Parts

According to the provided design drawings, we can manufacture various motor shell and parts/fittings from the weight of 2.5 kg to 4 kg. We have the advanced production facilities of aluminum die castings and zinc alloy die castings, which include 6 automatic die casting machines. All our motor shells are finished on the 630-tonnage die casting machines. The die casting facilities are also equipped with CNC machines, processing centre, milling machines, drilling machines and abrasive blasting machine, vibratory mullers, etc.

Surfaces of motor shells and motor fittings are treated by the abrasive blasting, shot blasting and processed on the milling machine, drilling machine. All our die casting products such as aluminum die castings and zinc ally die castings are produced by progressive technologies according to program files.

We take every manufacturing stage and details into account, which make the sound quality motor shell and fillings/parts. Many of our motor shell and fillings/parts are exported to Europe and have set good markets for a long times because of their firm and long service life, pretty look and free-air vent.
